-

1. Introduction

NIST and ISO aligned company `control` baseline with verification `evidence` .

1.1. Scope and Assumptions

- `Functional Groups` and `Functional Units` are the stable authored design backbone.
- `Runtime elements` and `code elements` are inferred from available IaC, deployment, and source artifacts.
- Inferred coverage is evidence-driven and may be partial when source metadata is missing.
- `Requirements` and reference indexes are provided for traceability, not as primary narrative flow.

2. How To Read This Document

This document is intentionally split into two layers:

1. Concept layer: functional and view-specific architecture narratives for human understanding.
2. Evidence layer: generated requirement traceability and inferred reference indexes.

Read in this order:

- 1. Architecture Intent View: stable authored architecture intent and ownership boundaries.
- 2. Communication / Deployment / Security Views: viewpoint-specific operational behavior.
- 3. Traceability View: requirement mapping, evidence coverage, and confidence.
- 4. Reference Appendix: supporting reference IDs and inferred-source links.

3. Document Health Snapshot

View	Authored Status	Authored Status Explanation	Units in Scope	Direct Evidence Coverage	Gap Count	Heuristic Confidence	Heuristic Basis
------	-----------------	-----------------------------	----------------	--------------------------	-----------	----------------------	-----------------

4. Terms and Definitions

Term	Definition
actor (TERM-ACTOR)	A person or operational role that interacts with functional units.
architecture decision (TERM-DECISION)	Authored architecture decision record with status, context, decision text, and consequences.
AsciiDoc diagram (TERM-ASCIIDOC-DIAGRAM)	Generated diagram block, usually Mermaid, that visualizes architecture relationships in the AsciiDoc publication.
AsciiDoc document (TERM-ASCIIDOC-DOCUMENT)	Human-readable generated architecture publication document assembled from authored model, inferred evidence, diagrams, references, and decisions.
AsciiDoc section (TERM-ASCIIDOC-SECTION)	Structured generated document section or row model used to render authored and inferred architecture content.
atlas compliance baseline (SYS-COMP)	Company control baseline and assurance evidence model.
attack vector (TERM-ATTACK-VECTOR)	A technical misuse or attack path that targets functional, referenced, or runtime elements.
authored mapping (TERM-AUTHORED-MAPPING)	An explicit relationship declared in architecture inputs between authored or referenced elements.
catalog (TERM-CATALOG)	Controlled vocabulary document used to normalize model, requirement, and generated-document terminology.
catalog entry (TERM-CATALOG-ENTRY)	A stable catalog term with a definition and aliases for linting, linking, and generated references.
CLI command (TERM-CLI-COMMAND)	Command-line entrypoint that coordinates loading, validation, generation, and file output for an engineering-model workflow.

Term	Definition
code element (TERM-CODE-ELEMENT)	An inferred code structure or ownership element discovered from source trees and build metadata.
compliance assurance (FG-COMP)	Shared control implementation and evidence management.
compliance evidence (DATA-COMP-EVIDENCE)	Immutable evidence supporting control assessment.
compliance evidence service (FU-COMP-EVIDENCE)	Collects control verification and audit evidence.
compliance mapping (TERM-COMPLIANCE-MAPPING)	Authored mapping that links a model control to selected compliance controls, model scope, implementation status, evidence, and responsible roles.
compliance officer (ACT-COMP-OFFICER)	Owns company control implementation status.
control (TERM-CONTROL)	An authored security, policy, or operational control used to constrain behavior and reduce risk.
control verification (TERM-CONTROL-VERIFICATION)	Authored control verification record with method, status, threat/risk scope, findings, and evidence.
data object (TERM-DATA-OBJECT)	An authored data artifact or contract shape traced across flow, interface, and implementation boundaries.
deployment target (TERM-DEPLOYMENT-TARGET)	An authored deployment destination such as environment, cluster, namespace, or registry scope.
design document (TERM-DESIGN)	Authored design narrative organized by model entities and architecture views.
design view (TERM-DESIGN-VIEW)	View-scoped design narrative attached to an authored functional group or functional unit.
employee (ACT-EMPLOYEE)	Worker subject to company policies and personnel-security controls.
event (TERM-EVENT)	An authored trigger signal that drives transitions, flow progress, or asynchronous outcomes.
evidence (TERM-EVIDENCE)	A file, artifact, or observation used to support control, risk, threat, or verification claims.
flow (TERM-FLOW)	An authored causal interaction sequence from user/system intent to outcome, represented as ordered steps.
flow step (TERM-FLOW-STEP)	A single authored step in a flow that captures action, data in/out, references, and normal/error/async transitions.

Term	Definition
functional group (TERM-FUNCTIONAL-GROUP)	A major authored capability area that groups related functional units.
functional unit (TERM-FUNCTIONAL-UNIT)	An authored working unit inside a functional group that owns specific behavior.
generation workflow (TERM-GENERATION-WORKFLOW)	Orchestrated run that combines model loading, validation, projection, rendering, and artifact emission.
inference hint (TERM-INFERENCE-HINT)	Authored source and ownership configuration used to discover runtime, code, and verification evidence.
inferred mapping (TERM-INFERRED-MAPPING)	A discovered relationship that links inferred runtime/code elements upward to authored design.
interface (TERM-INTERFACE)	An authored interface boundary (for example API, channel, endpoint, or contract) owned by a functional unit.
line manager (ACT-LINE-MANAGER)	Manager accountable for initiating and confirming employee lifecycle changes.
lint run (TERM-LINT-RUN)	Requirement lint configuration that controls parsing and quality checks for requirement text.
LOBSTER activity trace (TERM-LOBSTER-ACTIVITY-TRACE)	Generated LOBSTER activity JSON that links verification evidence back to formal requirement identifiers.
MCP server (TERM-MCP-SERVER)	Model Context Protocol server that exposes engineering-model operations to AI agents through JSON-RPC tools.
MCP stdio transport (TERM-MCP-STDIO-TRANSPORT)	Content-Length framed standard input/output transport used by the MCP command-line server.
MCP tool (TERM-MCP-TOOL)	Named MCP operation with a constrained input schema and structured response payload.
MCP tool response (TERM-MCP-TOOL-RESPONSE)	Structured MCP tool payload that includes success state, schema version, generated timestamp, and result data or validation error.
model (TERM-MODEL)	The authored architecture model root that composes functional structure, relationships, inference hints, and views.
model bundle (TERM-BUNDLE)	Loaded architecture, catalog, and companion documents resolved as one working model context.
Open OTM document (TERM-OPEN-OTM-DOCUMENT)	Open Threat Model JSON representation generated from the engineering model for interoperable threat-model exchange.

Term	Definition
OSCAL assessment results (TERM-OSCAL-ASSESSMENT-RESULTS)	Generated OSCAL assessment results that summarize reviewed controls, verification findings, and modeled risks.
OSCAL POA&M (TERM-OSCAL-POAM)	Generated OSCAL plan of action and milestones that maps modeled POA&M items and related risks into compliance JSON.
OSCAL SSP (TERM-OSCAL-SSP)	Generated OSCAL system security plan that maps authored system metadata, components, controls, allocations, and evidence into SSP JSON.
people operations partner (ACT-PEOPLE-OPERATIONS)	Human-resources representative responsible for personnel records and screening coordination.
people security and awareness (FU-COMP-PEOPLE)	Manages personnel screening, policy acknowledgment, training, role changes, and offboarding assurance.
personnel lifecycle record (DATA-PERSONNEL-RECORD)	Authorized record of screening, employment state, role changes, and termination actions.
POA&M item (TERM-POAM-ITEM)	Plan of action and milestones item linked to a modeled risk and supporting artifacts.
policy acknowledgment (DATA-POLICY-ACKNOWLEDGMENT)	Recorded acceptance of employment and acceptable-use responsibilities.
reference index (TERM-REFERENCE-INDEX)	Generated index of authored, catalog, runtime, code, and verification references with stable anchors and backlinks.
referenced element (TERM-REFERENCED-ELEMENT)	An architecture-relevant external, platform, or third-party dependency represented by role.
repository index (TERM-REPO-INDEX)	Bounded first-party source index used to answer model-aware file, requirement, control, and threat lookup queries.
requirement (TERM-REQUIREMENT)	A structured requirement statement that defines expected system behavior and maps to functional ownership.
risk (TERM-RISK)	Authored risk record with likelihood, impact, response, scope, controls, and evidence.
runtime element (TERM-RUNTIME-ELEMENT)	An inferred runtime realization element discovered from infrastructure and deployment sources.
security awareness training record (DATA-TRAINING-RECORD)	Evidence that an employee completed required information-security education.
security context (TERM-SECURITY-CONTEXT)	Security-focused generated context view that groups owned functional units and shows external actors, references, flows, controls, and trust boundaries.
source block (TERM-SOURCE-BLOCK)	Stable source reference block that records file path, optional line span, kind, summary, and linked entity IDs.

Term	Definition
state (TERM-STATE)	An authored lifecycle state used to model transition behavior, guards, and event-driven progression.
Structurizr DSL (TERM-STRUCTURIZR-DSL)	Generated Structurizr DSL workspace that projects authored architecture, relationships, dynamic views, and deployment metadata.
threat assumption (TERM-THREAT-ASSUMPTION)	Authored security assumption that records scope, rationale, owner, status, and evidence.
Threat Dragon document (TERM-THREAT-DRAGON-DOCUMENT)	Threat Dragon JSON representation generated from the engineering model for STRIDE threat-model review.
threat mitigation (TERM-THREAT-MITIGATION)	Authored mitigation record that links a threat scenario to a control, effectiveness, verification, and evidence.
threat model export (TERM-THREAT-MODEL-EXPORT)	Generated security artifact that translates authored architecture, flows, trust boundaries, threats, and mitigations into an external threat-model schema.
threat out-of-scope decision (TERM-THREAT-OUT-OF-SCOPE)	Authored decision that excludes a threat concern from current scope with reason, owner, expiry, and evidence.
threat scenario (TERM-THREAT-SCENARIO)	Authored threat narrative that connects attack vectors, scope, flows, controls, risks, and verification evidence.
trace marker (TERM-TRACE-MARKER)	Source-level marker such as TRLC-LINKS or ENGMODEL-LINKS used to connect declarations to requirements and model entities.
TRLC package (TERM-TRLC-PACKAGE)	Generated TRLC model and requirements package used for formal requirement traceability processing.
trust boundary (TERM-TRUST-BOUNDARY)	An authored trust separation zone that marks policy, identity, or security control boundaries.
upward linking (TERM-UPWARD-LINKING)	Rule where runtime and code elements point to stable functional groups/units; authored architecture does not depend on inferred IDs.
validation (TERM-VALIDATION)	Model quality gate that checks authored documents, references, relationship semantics, and requirement lint results.
validation diagnostic (TERM-VALIDATION-DIAGNOSTIC)	Structured validation finding with code, severity, message, and optional source path.
verification check (TERM-VERIFICATION-CHECK)	An inferred or authored verification artifact that validates requirement behavior with test evidence.
view (TERM-VIEW)	Authored projection configuration that selects roots, entity kinds, mappings, audience, and abstraction.

5. Architecture Decision Records

Architecture decision records are generated separately and linked here as a compact index.

ID	Title	Status	Date
ADR-COMP-001	Model the company baseline as a reusable module	accepted	2026-09-19
ADR-COMP-002	Centralize employee lifecycle controls	accepted	2026-09-19

5.1. Diagram Color and Shape Legend

This legend applies to all Mermaid diagrams in this document.

6. Traceability Appendix

6.1. Requirement Details

6.1.1. REQ-COMP-001

The atlas compliance baseline shall retain compliance evidence using the compliance evidence service .

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.2. REQ-COMP-002

The atlas compliance baseline shall report control implementation status to the compliance officer .

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.3. REQ-COMP-003

The people security and awareness shall record employee screening status in the personnel lifecycle record before privileged access.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.4. REQ-COMP-004

The people security and awareness shall record policy acknowledgment for every employee at onboarding.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.5. REQ-COMP-005

The people security and awareness shall record annual employee completion in the security awareness training record.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.6. REQ-COMP-006

The people security and awareness shall request a line manager access review following an employee role change.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.7. REQ-COMP-007

The people security and awareness shall revoke employee access following employment termination.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.1.8. REQ-COMP-008

The people security and awareness shall request people operations partner confirmation of company asset return following employment termination.

Requirement-to-Unit-to-Evidence Coverage

What this diagram shows: this requirement-to-unit mapping extended with inferred runtime/code plus verification evidence attached to each requirement and unit.

6.2. Verification Inventory

What this section shows: verification checks inferred from test artifacts, linked to test code elements and mapped to verified requirements.

7. Gemara GRC Model

This chapter renders the model as OpenSSF Gemara (<https://gemara.openssf.org>) documents. Each artifact is built with the official `go-gemara` SDK types and validated against the published Gemara CUE schemas. Generate the full YAML set with `enggemara` ; query it via the `gemara.*` MCP tools.

Gemara Layer	Artifact	Entries
L1	Vector Catalog	0
L1	Principle Catalog	5
L1	Guidance Catalog	4
L2	Capability Catalog	3
L2	Control Catalog	7
L2	Threat Catalog	0
L3	Risk Catalog	3
L3	Policy	5
-	Lexicon	12
L7	Audit Log	8
L6	Enforcement Log	2

7.1. Controls (L2)

Control	Objective	Group	Assessment Requirements
CTRL-COMP-ACCESS-REVIEW	Reviews privileged access quarterly.	access-control	1
CTRL-COMP-EVIDENCE-RETENTION	Retains signed assessment evidence for seven years.	audit	1
CTRL-COMP-PERSONNEL-SCREENING	Applies risk-appropriate screening before privileged access is authorized.	personnel-security	1
CTRL-COMP-POLICY-ACKNOWLEDGMENT	Records acceptance of security and acceptable-use responsibilities.	personnel-security	1

Control	Objective	Group	Assessment Requirements
CTRL-COMP-SECURITY-AWARENESS	Provides initial and annual awareness education with completion tracking.	awareness-and-training	1
CTRL-COMP-ROLE-CHANGE-REVIEW	Reassesses access and responsibilities when an employee changes role.	access-control	1
CTRL-COMP-OFFBOARDING	Coordinates access revocation, responsibility transfer, and company asset return.	personnel-security	1

7.2. Risks (L3)

Risk	Title	Severity
RISK-COMP-ACCESS-REVIEW-GAP	Delayed privileged access review	Low
RISK-COMP-UNTRAINED-PERSONNEL	Personnel miss security obligations	High
RISK-COMP-RETAINED-ACCESS	Former or transferred personnel retain access	Medium

8. Reference Index

8.1. Authored References

CTRL-COMP-ACCESS-REVIEW

category=access-control; description=Reviews privileged access quarterly.

Key	Value
Kind	Control
Name	Quarterly Access Review
Mentioned In	n/a

CTRL-COMP-EVIDENCE-RETENTION

category=audit; description=Retains signed assessment evidence for seven years.

Key	Value
Kind	Control
Name	Evidence Retention
Mentioned In	n/a

CTRL-COMP-OFFBOARDING

category=personnel-security; description=Coordinates access revocation, responsibility transfer, and company asset return.

Key	Value
Kind	Control
Name	Personnel Offboarding
Mentioned In	n/a

CTRL-COMP-PERSONNEL-SCREENING

category=personnel-security; description=Applies risk-appropriate screening before privileged access is authorized.

Key	Value
Kind	Control
Name	Personnel Screening

Key	Value
Mentioned In	n/a

CTRL-COMP-POLICY-ACKNOWLEDGMENT

category=personnel-security; description=Records acceptance of security and acceptable-use responsibilities.

Key	Value
Kind	Control
Name	Employment Security Responsibilities
Mentioned In	n/a

CTRL-COMP-ROLE-CHANGE-REVIEW

category=access-control; description=Reassesses access and responsibilities when an employee changes role.

Key	Value
Kind	Control
Name	Role Change Review
Mentioned In	n/a

CTRL-COMP-SECURITY-AWARENESS

category=awareness-and-training; description=Provides initial and annual awareness education with completion tracking.

Key	Value
Kind	Control
Name	Security Awareness Education
Mentioned In	n/a

DO-COMP-EVIDENCE

termRef=DATA-COMP-EVIDENCE; schemaRef=n/a; sensitivity=restricted

Key	Value
Kind	Data Object
Name	Compliance Evidence Package
Mentioned In	n/a

DO-COMP-PERSONNEL-RECORD

termRef=DATA-PERSONNEL-RECORD; schemaRef=n/a; sensitivity=restricted

Key	Value
Kind	Data Object
Name	Personnel Lifecycle Record
Mentioned In	REQ-COMP-003

DO-COMP-TRAINING-RECORD

termRef=DATA-TRAINING-RECORD; schemaRef=n/a; sensitivity=internal

Key	Value
Kind	Data Object
Name	Security Awareness Training Record
Mentioned In	REQ-COMP-005

FLOW-COMP-EMPLOYEE-LIFECYCLE

entry=screen-personnel; exits=confirm-offboarding; steps=5

Key	Value
Kind	Flow
Name	Employee Security Lifecycle
Mentioned In	n/a

FLOW-COMP-EMPLOYEE-LIFECYCLE::acknowledge-policy

kind=user_action; ref=ACT-EMPLOYEE; action=Accept employment security and acceptable-use responsibilities; dataIn=; dataOut=; async=false

Key	Value
Kind	Flow Step
Name	Accept employment security and acceptable-use responsibilities
Mentioned In	n/a

FLOW-COMP-EMPLOYEE-LIFECYCLE::complete-awareness-training

kind=user_action; ref=ACT-EMPLOYEE; action=Complete initial and annual security awareness training; dataIn=; dataOut=; async=false

Key	Value
Kind	Flow Step
Name	Complete initial and annual security awareness training
Mentioned In	n/a

FLOW-COMP-EMPLOYEE-LIFECYCLE::confirm-offboarding

kind=user_action; ref=ACT-PEOPLE-OPERATIONS; action=Confirm timely access revocation and asset return at termination; dataIn=; dataOut=; async=false

Key	Value
Kind	Flow Step
Name	Confirm timely access revocation and asset return at termination
Mentioned In	n/a

FLOW-COMP-EMPLOYEE-LIFECYCLE::review-role-change

kind=user_action; ref=ACT-LINE-MANAGER; action=Review responsibilities and access when a role changes; dataIn=; dataOut=; async=false

Key	Value
Kind	Flow Step
Name	Review responsibilities and access when a role changes
Mentioned In	n/a

FLOW-COMP-EMPLOYEE-LIFECYCLE::screen-personnel

kind=user_action; ref=ACT-PEOPLE-OPERATIONS; action=Complete risk-appropriate screening before access approval; dataIn=; dataOut=; async=false

Key	Value
Kind	Flow Step
Name	Complete risk-appropriate screening before access approval
Mentioned In	n/a

The atlas compliance baseline shall retain compliance evidence using the compliance evidence service.

Key	Value
Kind	Requirement
Name	REQ-COMP-001
Mentioned In	n/a

REQ-COMP-002

The atlas compliance baseline shall report control implementation status to the compliance officer.

Key	Value
Kind	Requirement
Name	REQ-COMP-002
Mentioned In	n/a

REQ-COMP-003

The people security and awareness shall record employee screening status in the personnel lifecycle record before privileged access.

Key	Value
Kind	Requirement
Name	REQ-COMP-003
Mentioned In	n/a

REQ-COMP-004

The people security and awareness shall record policy acknowledgment for every employee at onboarding.

Key	Value
Kind	Requirement
Name	REQ-COMP-004
Mentioned In	n/a

REQ-COMP-005

The people security and awareness shall record annual employee completion in the security awareness training record.

Key	Value
Kind	Requirement
Name	REQ-COMP-005
Mentioned In	n/a

REQ-COMP-006

The people security and awareness shall request a line manager access review following an employee role change.

Key	Value
Kind	Requirement
Name	REQ-COMP-006
Mentioned In	n/a

REQ-COMP-007

The people security and awareness shall revoke employee access following employment termination.

Key	Value
Kind	Requirement
Name	REQ-COMP-007
Mentioned In	n/a

REQ-COMP-008

The people security and awareness shall request people operations partner confirmation of company asset return following employment termination.

Key	Value
Kind	Requirement
Name	REQ-COMP-008
Mentioned In	n/a

8.2. Catalog References

ACT-COMP-OFFICER

Owns company control implementation status.

Key	Value
Kind	Catalog Actor
Name	compliance officer
Mentioned In	REQ-COMP-002

ACT-EMPLOYEE

Worker subject to company policies and personnel-security controls.

Key	Value
Kind	Catalog Actor
Name	employee
Mentioned In	REQ-COMP-003 , REQ-COMP-004 , REQ-COMP-005 , REQ-COMP-006 , REQ-COMP-007

ACT-LINE-MANAGER

Manager accountable for initiating and confirming employee lifecycle changes.

Key	Value
Kind	Catalog Actor
Name	line manager
Mentioned In	REQ-COMP-006

ACT-PEOPLE-OPERATIONS

Human-resources representative responsible for personnel records and screening coordination.

Key	Value
Kind	Catalog Actor
Name	people operations partner
Mentioned In	REQ-COMP-008

DATA-COMP-EVIDENCE

Immutable evidence supporting control assessment.

Key	Value
Kind	Catalog Data Term

Key	Value
Name	compliance evidence
Mentioned In	REQ-COMP-001

DATA-PERSONNEL-RECORD

Authorized record of screening, employment state, role changes, and termination actions.

Key	Value
Kind	Catalog Data Term
Name	personnel lifecycle record
Mentioned In	n/a

DATA-POLICY-ACKNOWLEDGMENT

Recorded acceptance of employment and acceptable-use responsibilities.

Key	Value
Kind	Catalog Data Term
Name	policy acknowledgment
Mentioned In	REQ-COMP-004

DATA-TRAINING-RECORD

Evidence that an employee completed required information-security education.

Key	Value
Kind	Catalog Data Term
Name	security awareness training record
Mentioned In	n/a

FG-COMP

Shared control implementation and evidence management.

Key	Value
Kind	Catalog Functional Group
Name	compliance assurance

Key	Value
Mentioned In	n/a

FU-COMP-EVIDENCE

Collects control verification and audit evidence.

Key	Value
Kind	Catalog Functional Unit
Name	compliance evidence service
Mentioned In	REQ-COMP-001

FU-COMP-PEOPLE

Manages personnel screening, policy acknowledgment, training, role changes, and offboarding assurance.

Key	Value
Kind	Catalog Functional Unit
Name	people security and awareness
Mentioned In	REQ-COMP-003 , REQ-COMP-004 , REQ-COMP-005 , REQ-COMP-006 , REQ-COMP-007 , REQ-COMP-008

SYS-COMP

Company control baseline and assurance evidence model.

Key	Value
Kind	Catalog System
Name	atlas compliance baseline
Mentioned In	REQ-COMP-001 , REQ-COMP-002

TERM-ACTOR

A person or operational role that interacts with functional units.

Key	Value
Kind	Engineering Model Term
Name	actor

Key	Value
Mentioned In	n/a

TERM-ASCIIDOC-DIAGRAM

Generated diagram block, usually Mermaid, that visualizes architecture relationships in the AsciiDoc publication.

Key	Value
Kind	Engineering Model Term
Name	AsciiDoc diagram
Mentioned In	n/a

TERM-ASCIIDOC-DOCUMENT

Human-readable generated architecture publication document assembled from authored model, inferred evidence, diagrams, references, and decisions.

Key	Value
Kind	Engineering Model Term
Name	AsciiDoc document
Mentioned In	n/a

TERM-ASCIIDOC-SECTION

Structured generated document section or row model used to render authored and inferred architecture content.

Key	Value
Kind	Engineering Model Term
Name	AsciiDoc section
Mentioned In	n/a

TERM-ATTACK-VECTOR

A technical misuse or attack path that targets functional, referenced, or runtime elements.

Key	Value
Kind	Engineering Model Term
Name	attack vector

Key	Value
Mentioned In	n/a

TERM-AUTHORED-MAPPING

An explicit relationship declared in architecture inputs between authored or referenced elements.

Key	Value
Kind	Engineering Model Term
Name	authored mapping
Mentioned In	n/a

TERM-BUNDLE

Loaded architecture, catalog, and companion documents resolved as one working model context.

Key	Value
Kind	Engineering Model Term
Name	model bundle
Mentioned In	n/a

TERM-CATALOG

Controlled vocabulary document used to normalize model, requirement, and generated-document terminology.

Key	Value
Kind	Engineering Model Term
Name	catalog
Mentioned In	n/a

TERM-CATALOG-ENTRY

A stable catalog term with a definition and aliases for linting, linking, and generated references.

Key	Value
Kind	Engineering Model Term
Name	catalog entry
Mentioned In	n/a

TERM-CLI-COMMAND

Command-line entrypoint that coordinates loading, validation, generation, and file output for an engineering-model workflow.

Key	Value
Kind	Engineering Model Term
Name	CLI command
Mentioned In	n/a

TERM-CODE-ELEMENT

An inferred code structure or ownership element discovered from source trees and build metadata.

Key	Value
Kind	Engineering Model Term
Name	code element
Mentioned In	n/a

TERM-COMPLIANCE-MAPPING

Authored mapping that links a model control to selected compliance controls, model scope, implementation status, evidence, and responsible roles.

Key	Value
Kind	Engineering Model Term
Name	compliance mapping
Mentioned In	n/a

TERM-CONTROL

An authored security, policy, or operational control used to constrain behavior and reduce risk.

Key	Value
Kind	Engineering Model Term
Name	control
Mentioned In	REQ-COMP-002

TERM-CONTROL-VERIFICATION

Authored control verification record with method, status, threat/risk scope, findings, and evidence.

Key	Value
Kind	Engineering Model Term
Name	control verification
Mentioned In	n/a

TERM-DATA-OBJECT

An authored data artifact or contract shape traced across flow, interface, and implementation boundaries.

Key	Value
Kind	Engineering Model Term
Name	data object
Mentioned In	n/a

TERM-DECISION

Authored architecture decision record with status, context, decision text, and consequences.

Key	Value
Kind	Engineering Model Term
Name	architecture decision
Mentioned In	n/a

TERM-DEPLOYMENT-TARGET

An authored deployment destination such as environment, cluster, namespace, or registry scope.

Key	Value
Kind	Engineering Model Term
Name	deployment target
Mentioned In	n/a

TERM-DESIGN

Authored design narrative organized by model entities and architecture views.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	design document
Mentioned In	n/a

TERM-DESIGN-VIEW

View-scoped design narrative attached to an authored functional group or functional unit.

Key	Value
Kind	Engineering Model Term
Name	design view
Mentioned In	n/a

TERM-EVENT

An authored trigger signal that drives transitions, flow progress, or asynchronous outcomes.

Key	Value
Kind	Engineering Model Term
Name	event
Mentioned In	n/a

TERM-EVIDENCE

A file, artifact, or observation used to support control, risk, threat, or verification claims.

Key	Value
Kind	Engineering Model Term
Name	evidence
Mentioned In	n/a

TERM-FLOW

An authored causal interaction sequence from user/system intent to outcome, represented as ordered steps.

Key	Value
Kind	Engineering Model Term
Name	flow

Key	Value
Mentioned In	n/a

TERM-FLOW-STEP

A single authored step in a flow that captures action, data in/out, references, and normal/error/async transitions.

Key	Value
Kind	Engineering Model Term
Name	flow step
Mentioned In	n/a

TERM-FUNCTIONAL-GROUP

A major authored capability area that groups related functional units.

Key	Value
Kind	Engineering Model Term
Name	functional group
Mentioned In	n/a

TERM-FUNCTIONAL-UNIT

An authored working unit inside a functional group that owns specific behavior.

Key	Value
Kind	Engineering Model Term
Name	functional unit
Mentioned In	n/a

TERM-GENERATION-WORKFLOW

Orchestrated run that combines model loading, validation, projection, rendering, and artifact emission.

Key	Value
Kind	Engineering Model Term
Name	generation workflow
Mentioned In	n/a

TERM-INFERENCE-HINT

Authored source and ownership configuration used to discover runtime, code, and verification evidence.

Key	Value
Kind	Engineering Model Term
Name	inference hint
Mentioned In	n/a

TERM-INFERRED-MAPPING

A discovered relationship that links inferred runtime/code elements upward to authored design.

Key	Value
Kind	Engineering Model Term
Name	inferred mapping
Mentioned In	n/a

TERM-INTERFACE

An authored interface boundary (for example API, channel, endpoint, or contract) owned by a functional unit.

Key	Value
Kind	Engineering Model Term
Name	interface
Mentioned In	n/a

TERM-LINT-RUN

Requirement lint configuration that controls parsing and quality checks for requirement text.

Key	Value
Kind	Engineering Model Term
Name	lint run
Mentioned In	n/a

TERM-LOBSTER-ACTIVITY-TRACE

Generated LOBSTER activity JSON that links verification evidence back to formal requirement identifiers.

Key	Value
Kind	Engineering Model Term
Name	LOBSTER activity trace
Mentioned In	n/a

TERM-MCP-SERVER

Model Context Protocol server that exposes engineering-model operations to AI agents through JSON-RPC tools.

Key	Value
Kind	Engineering Model Term
Name	MCP server
Mentioned In	n/a

TERM-MCP-STDIO-TRANSPORT

Content-Length framed standard input/output transport used by the MCP command-line server.

Key	Value
Kind	Engineering Model Term
Name	MCP stdio transport
Mentioned In	n/a

TERM-MCP-TOOL

Named MCP operation with a constrained input schema and structured response payload.

Key	Value
Kind	Engineering Model Term
Name	MCP tool
Mentioned In	n/a

TERM-MCP-TOOL-RESPONSE

Structured MCP tool payload that includes success state, schema version, generated timestamp, and result data or validation error.

Key	Value
Kind	Engineering Model Term
Name	MCP tool response
Mentioned In	n/a

TERM-MODEL

The authored architecture model root that composes functional structure, relationships, inference hints, and views.

Key	Value
Kind	Engineering Model Term
Name	model
Mentioned In	n/a

TERM-OPEN-OTM-DOCUMENT

Open Threat Model JSON representation generated from the engineering model for interoperable threat-model exchange.

Key	Value
Kind	Engineering Model Term
Name	Open OTM document
Mentioned In	n/a

TERM-OSCAL-ASSESSMENT-RESULTS

Generated OSCAL assessment results that summarize reviewed controls, verification findings, and modeled risks.

Key	Value
Kind	Engineering Model Term
Name	OSCAL assessment results
Mentioned In	n/a

TERM-OSCAL-POAM

Generated OSCAL plan of action and milestones that maps modeled POA&M items and related risks into compliance JSON.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	OSCAL POA&M
Mentioned In	n/a

TERM-OSCAL-SSP

Generated OSCAL system security plan that maps authored system metadata, components, controls, allocations, and evidence into SSP JSON.

Key	Value
Kind	Engineering Model Term
Name	OSCAL SSP
Mentioned In	n/a

TERM-POAM-ITEM

Plan of action and milestones item linked to a modeled risk and supporting artifacts.

Key	Value
Kind	Engineering Model Term
Name	POA&M item
Mentioned In	n/a

TERM-REFERENCE-INDEX

Generated index of authored, catalog, runtime, code, and verification references with stable anchors and backlinks.

Key	Value
Kind	Engineering Model Term
Name	reference index
Mentioned In	n/a

TERM-REFERENCED-ELEMENT

An architecture-relevant external, platform, or third-party dependency represented by role.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	referenced element
Mentioned In	n/a

TERM-REPO-INDEX

Bounded first-party source index used to answer model-aware file, requirement, control, and threat lookup queries.

Key	Value
Kind	Engineering Model Term
Name	repository index
Mentioned In	n/a

TERM-REQUIREMENT

A structured requirement statement that defines expected system behavior and maps to functional ownership.

Key	Value
Kind	Engineering Model Term
Name	requirement
Mentioned In	n/a

TERM-RISK

Authored risk record with likelihood, impact, response, scope, controls, and evidence.

Key	Value
Kind	Engineering Model Term
Name	risk
Mentioned In	n/a

TERM-RUNTIME-ELEMENT

An inferred runtime realization element discovered from infrastructure and deployment sources.

Key	Value
Kind	Engineering Model Term
Name	runtime element

Key	Value
Mentioned In	n/a

TERM-SECURITY-CONTEXT

Security-focused generated context view that groups owned functional units and shows external actors, references, flows, controls, and trust boundaries.

Key	Value
Kind	Engineering Model Term
Name	security context
Mentioned In	n/a

TERM-SOURCE-BLOCK

Stable source reference block that records file path, optional line span, kind, summary, and linked entity IDs.

Key	Value
Kind	Engineering Model Term
Name	source block
Mentioned In	n/a

TERM-STATE

An authored lifecycle state used to model transition behavior, guards, and event-driven progression.

Key	Value
Kind	Engineering Model Term
Name	state
Mentioned In	n/a

TERM-STRUCTURIZR-DSL

Generated Structurizr DSL workspace that projects authored architecture, relationships, dynamic views, and deployment metadata.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	Structurizr DSL
Mentioned In	n/a

TERM-THREAT-ASSUMPTION

Authored security assumption that records scope, rationale, owner, status, and evidence.

Key	Value
Kind	Engineering Model Term
Name	threat assumption
Mentioned In	n/a

TERM-THREAT-DRAGON-DOCUMENT

Threat Dragon JSON representation generated from the engineering model for STRIDE threat-model review.

Key	Value
Kind	Engineering Model Term
Name	Threat Dragon document
Mentioned In	n/a

TERM-THREAT-MITIGATION

Authored mitigation record that links a threat scenario to a control, effectiveness, verification, and evidence.

Key	Value
Kind	Engineering Model Term
Name	threat mitigation
Mentioned In	n/a

TERM-THREAT-MODEL-EXPORT

Generated security artifact that translates authored architecture, flows, trust boundaries, threats, and mitigations into an external threat-model schema.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	threat model export
Mentioned In	n/a

TERM-THREAT-OUT-OF-SCOPE

Authored decision that excludes a threat concern from current scope with reason, owner, expiry, and evidence.

Key	Value
Kind	Engineering Model Term
Name	threat out-of-scope decision
Mentioned In	n/a

TERM-THREAT-SCENARIO

Authored threat narrative that connects attack vectors, scope, flows, controls, risks, and verification evidence.

Key	Value
Kind	Engineering Model Term
Name	threat scenario
Mentioned In	n/a

TERM-TRACE-MARKER

Source-level marker such as TRLC-LINKS or ENGMODEL-LINKS used to connect declarations to requirements and model entities.

Key	Value
Kind	Engineering Model Term
Name	trace marker
Mentioned In	n/a

TERM-TRLC-PACKAGE

Generated TRLC model and requirements package used for formal requirement traceability processing.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	TRLC package
Mentioned In	n/a

TERM-TRUST-BOUNDARY

An authored trust separation zone that marks policy, identity, or security control boundaries.

Key	Value
Kind	Engineering Model Term
Name	trust boundary
Mentioned In	n/a

TERM-UPWARD-LINKING

Rule where runtime and code elements point to stable functional groups/units; authored architecture does not depend on inferred IDs.

Key	Value
Kind	Engineering Model Term
Name	upward linking
Mentioned In	n/a

TERM-VALIDATION

Model quality gate that checks authored documents, references, relationship semantics, and requirement lint results.

Key	Value
Kind	Engineering Model Term
Name	validation
Mentioned In	n/a

TERM-VALIDATION-DIAGNOSTIC

Structured validation finding with code, severity, message, and optional source path.

Key	Value
Kind	Engineering Model Term

Key	Value
Name	validation diagnostic
Mentioned In	n/a

TERM-VERIFICATION-CHECK

An inferred or authored verification artifact that validates requirement behavior with test evidence.

Key	Value
Kind	Engineering Model Term
Name	verification check
Mentioned In	n/a

TERM-VIEW

Authored projection configuration that selects roots, entity kinds, mappings, audience, and abstraction.

Key	Value
Kind	Engineering Model Term
Name	view
Mentioned In	n/a

8.3. Inferred Runtime References

8.4. Inferred Code References

8.5. Verification References
